Technical Information TH51, TH52 and TH56

General purpose MgO insulated thermocouples with connection head, extension lead wires or connectors for process and laboratory applications

Application

Magnesium Oxide (MgO) insulated thermocouples are used in many process and laboratory applications. They have many desirable characteristics making thermocouples a good choice for general and special purpose applications.

The sensors can be used on:

- Heat exchangers
- Power and recovery areas
- Furnaces, dryers, flue gas
- Compressor stations
- Process reactors
- Metallurgical and glass manufacturing

Head transmitter

All Endress+Hauser transmitters are available with enhanced accuracy and reliability compared to directly wired sensors. Easy customizing by choosing one of the following outputs and communication protocols:

- Analog output 4 to 20 mA
- HART
- PROFIBUS® PA
- FOUNDATION Fieldbus™
- Bluetooth® connectivity (optional)

Field transmitter

Temperature field transmitters with HART® or FOUNDATION Fieldbus™ protocol for highest reliability in harsh industrial environments. Backlit display with large measured value, bargraph and fault condition indication for ease of reading.

Your benefits

- One source shopping for temperature measurement solutions. World class transmitter with integrated sensor offering.
 Remove and install straight out of the box!
- Improved galvanic isolation on most devices (2 kV)
- Simplified model structure: Competitively priced, offers great value. Easy to order and reorder. A single model number includes sensor and transmitter assembly for a complete point solution.
- All iTEMP transmitters provide long-term stability ≤ 0.05% per year

Function and system design

Measuring principle

Thermocouples (TC)

Thermocouples are comparatively simple, robust temperature sensors which use the Seebeck effect for temperature measurement: if two electrical conductors made of different materials are connected at a point, a weak electrical voltage can be measured between the two open conductor ends if the conductors are subjected to a thermal gradient. This voltage is called thermoelectric voltage or electromotive force (emf.). Its magnitude depends on the type of conducting materials and the temperature difference between the "measuring point" (the junction of the two conductors) and the "cold junction" (the open conductor ends). Accordingly, thermocouples primarily only measure differences in temperature. The absolute temperature at the measuring point can be determined from these if the associated temperature at the cold junction is known or is measured separately and compensated for. The material combinations and associated thermoelectric voltage/temperature characteristics of the most common types of thermocouple are standardized in the IEC 60584 and ASTM E230/ANSI MC96.1 standards.

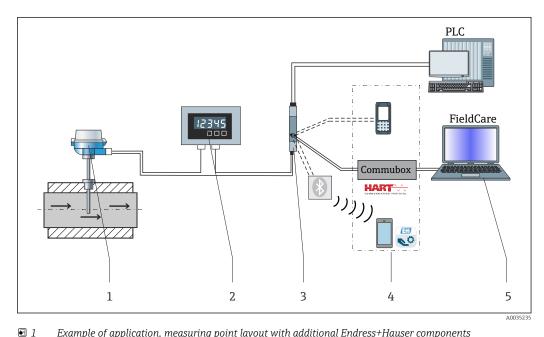

Measuring system

Endress+Hauser offers a complete portfolio of optimized components for the temperature measuring point – everything you need for the seamless integration of the measuring point into the overall facility. This includes:

- Power supply unit/barrier
- Display units
- Overvoltage protection

For more information, see the brochure 'System Components - Solutions for a Complete Measuring Point' (FA00016K/EN)

- Example of application, measuring point layout with additional Endress+Hauser components
- Installed thermometer with HART® communication protocol
- RIA15 loop powered process display It is integrated in the current loop and displays the measuring signal or HART® process variables in digital form. The process display unit does not require an external power supply. It is powered directly from the current loop. More information on this can be found in the Technical Information, see "Documentation", .
- Active barrier RN42 The RN42 (17.5 V_{DC} , 20 mA) active barrier has a galvanic isolated output for supplying voltage to loop powered transmitters. The universal power supply works with an input supply voltage of 24 to 230 V AC/DC, 0/50/60 Hz, which means that it can be used in all international power grids. More information on this can be found in the Technical Information, see "Documentation"..
- Communication examples: HART® handheld communicator FieldXpert, Commubox FXA195 for intrinsically safe HART® communication with FieldCare via the USB interface, Bluetooth® technology with SmartBlue App.
- FieldCare is a FDT-based plant asset management tool from Endress+Hauser, more details see section 'accessories'.

Measured variable

Temperature (temperature-linear transmission behavior)

Measurement range

Measuring range by type and size

	Upper temperature limits for various sheath diameters °C (°F)								
Nominal diameter				Thermocouple type					
Sheath O.D.	Element wire Ø (in)	Element wire gauge	T	J	E	К	N		
Ø ½16 in	0.010	30	260 °C (500 °F)	440 °C (825 °F)	510 °C (950 °F)	920°C (1690°F)			
Ø 1/8 in	0.020	24	315 °C (600 °F)	520 °C (970 °F)	650 °C (1200 °F)	1070 °C (1960 °F)			
Ø 3/ ₁₆ in	0.029	21		620 °C (1150 °F)	730 °C (1350 °F)				
Ø 1/4 in	0.039	19	370 ℃ (700 °F)	720 °C (1330 °F)	820 °C (1510 °F)	1 150 °C (2 100 °F)			
Ø 3/8 in	0.060	15							
Maximum element temperature range limits		-270 to +400 °C (-454 to +752 °F)	-210 to +1200 °C (-346 to +2192 °F)	-270 to +1000 °C (-454 to +1832 °F)	-270 to +1372 °C (-454 to +2500 °F)	-270 to +1300 °C (-454 to +2372 °F)			

These values are valid for single and duplex thermocouples. The temperature limits given are intended only as a guide to the user and should not be taken as absolute values or as guarantees of satisfactory life or performance. These types and sizes are sometimes used at temperatures above the given limits, but usually at the expense of stability or life or both. In other instances, it may be necessary to reduce the above limits in order to achieve adequate service.

Duplex versions (2 elements) of type N with $\frac{1}{16}$ in, $\frac{3}{16}$ in and $\frac{3}{6}$ in sheath diameter are not available. Thermocouples with 316 SS sheath are rated for a maximum temperature of 927 °C (1700 °F).

Output

Output signal

Generally, the measured value can be transmitted in one of two ways:

- Directly-wired sensors sensor measured values forwarded without a transmitter.
- Via all common protocols by selecting an appropriate Endress+Hauser iTEMP temperature transmitter. All the transmitters listed below are mounted directly in the terminal head or as field transmitter and wired with the sensory mechanism.

Family of temperature transmitters

Thermometers fitted with iTEMP transmitters are an installation-ready complete solution to improve temperature measurement by significantly increasing accuracy and reliability, when compared to direct wired sensors, as well as reducing both wiring and maintenance costs.

4 to 20 mA head transmitters

They offer a high degree of flexibility, thereby supporting universal application with low inventory storage. The iTEMP transmitters can be configured quickly and easily at a PC. Endress+Hauser offers free configuration software which can be downloaded from the Endress+Hauser Website. More information can be found in the Technical Information.

HART® head transmitters

The transmitter is a 2-wire device with one or two measuring inputs and one analog output. The device not only transfers converted signals from resistance thermometers and thermocouples, it also transfers resistance and voltage signals using HART $^{\circ}$ communication. Swift and easy operation, visualization and maintenance using universal device configuration tools like FieldCare, DeviceCare or FieldCommunicator 375/475. Integrated Bluetooth $^{\circ}$ interface for the wireless display of

measured values and configuration via E+H SmartBlue (app), optional. For more information, see the Technical Information.

PROFIBUS® PA head transmitters

Universally programmable head transmitter with PROFIBUS® PA communication. Conversion of various input signals into digital output signals. High accuracy over the complete ambient temperature range. The configuration of PROFIBUS PA functions and of device-specific parameters is performed via fieldbus communication. For more information, see the Technical Information.

FOUNDATION Fieldbus™ head transmitters

Universally programmable head transmitter with FOUNDATION Fieldbus™ communication. Conversion of various input signals into digital output signals. High accuracy over the complete ambient temperature range. All transmitters are released for use in all important process control systems. The integration tests are performed in Endress+Hauser's "System World". For more information, see the Technical Information.

Advantages of the iTEMP transmitters:

- Dual or single sensor input (optionally for certain transmitters)
- Pluggable display (optionally for certain transmitters)
- Unsurpassed reliability, accuracy and long-term stability in critical processes
- Mathematical functions
- Monitoring of the thermometer drift, sensor backup functionality, sensor diagnostic functions
- Sensor-transmitter matching for dual sensor input transmitters, based on Callendar-Van-Dusencoefficients (CvD).

Field transmitter

Field transmitter with HART®. FOUNDATION Fieldbus™ or PROFIBUS® PA communication and backlit display. Can be read easily from a distance, in sunlight and at night. Large measurement value, bargraph and fault indication displayed. Benefits are: dual sensor input, highest reliability in harsh industrial environments, mathematic functions, thermometer drift monitoring and sensor back-up functionality, corrosion detection.

Galvanic isolation

Galvanic isolation of Endress+Hauser iTEMP transmitters

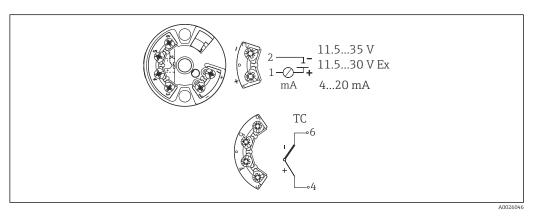

Transmitter type	Sensor
TMT181 PCP	Û = 3.75 kV AC
TMT182 HART®	
TMT162 HART® Field transmitter	
TMT71	
TMT72 HART®	U = 2 kV AC
TMT82 HART®	U - Z KV AC
TMT84 PA	
TMT85 FF	
TMT142B	

In applications where fast response time ist needed, grounded thermocouples are recommended. This thermocouple design may cause a ground loop. This can be avoided by using ITEMP transmitters with high galvanic isolation

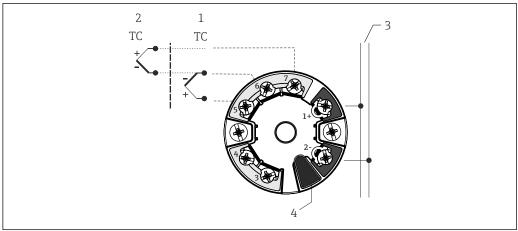

Power supply

Terminal assignments

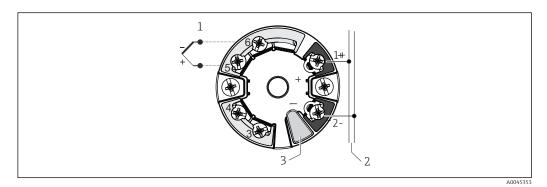

Type of sensor connection

₽ 2 Head mounted transmitter TMT18x (single input)

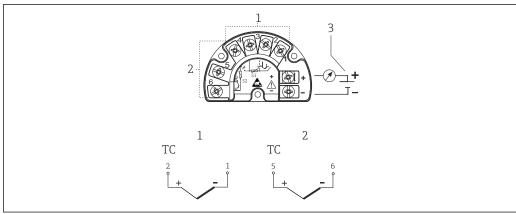

- Head mounted transmitter TMT8x (dual input)
- Sensor input 2
- Sensor input 1

- 1 Sensor 1
- 2 Sensor 2 (not TMT142B)
- 3 Power supply field transmitter and analog output 4 to 20 mA or bus connection

A004563

- 6 Terminal block mounted
- 1 Sensor 1
- 2 Sensor 2

The blocks and transmitters are shown as they sit inside the heads in reference to the conduit opening.

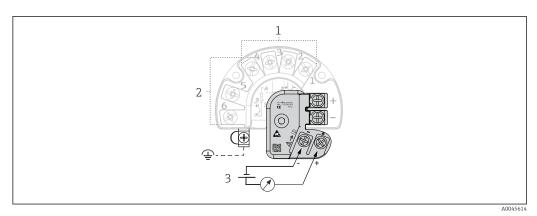

Integrated overvoltage protection

The integrated overvoltage protection module can be ordered as an optional extra $^{1)}$. The module protects the electronics from damage from overvoltage. Overvoltage occurring in signal cables (e.g. 4 to 20 mA, communication lines (fieldbus systems) and power supply is diverted to ground. The functionality of the transmitter is not affected as no problematic voltage drop occurs.

Connection data:

Maximum continuous voltage (rated voltage)	$U_C = 42 V_{DC}$
Nominal current	$I = 0.5 \text{ A} \text{ at } T_{amb.} = 80 ^{\circ}\text{C} (176 ^{\circ}\text{F})$
Surge current resistance • Lightning surge current D1 (10/350 μs) • Nominal discharge current C1/C2 (8/20 μs)	■ I _{imp} = 1 kA (per wire) ■ I _n = 5 kA (per wire) I _n = 10 kA (total)
Temperature range	-40 to +80 °C (-40 to +176 °F)
Series resistance per wire	1.8 Ω, tolerance ±5 %

¹⁾ Available for the field transmitter with HART® 7 specification

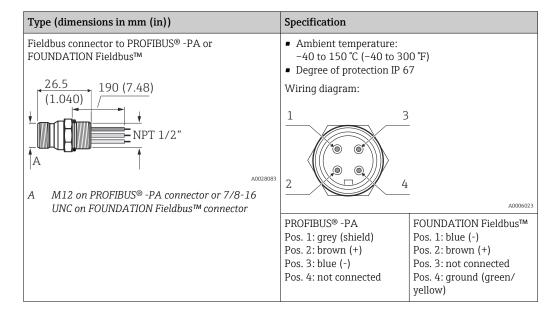

■ 7 Electrical connection of the overvoltage protection

- 1 Sensor 1
- 2 Sensor 2
- 3 Bus connection and supply voltage

Grounding

The device must be connected to the potential equalization. The connection between the housing and the local ground must have a minimum cross-section of $4\ mm^2$ (13 AWG) . All ground connections must be secured tightly.

Fieldbus connector

Performance characteristics

Reference conditions

These data are relevant for determining the accuracy of the temperature transmitters used. More information on this can be found in the Technical Information of the iTEMP temperature transmitters.

Response time

63% response time per ASTM E839

Junction style	ؽ16"	ø1/8"	س/ ₁₆ "	Ø1/4"	س/ ₈ "
Grounded	0.3 s	0.6 s	0.9 s	1.3 s	3.5 s
Ungrounded	0.4 s	1.6 s	2.4 s	2.9 s	7.2 s

Response time for the sensor assembly without transmitter.

Maximum measured error

Thermocouples corresponding to ASTM E230

Туре	Temperature range	Standard tolerance (IEC class 2)	Special tolerance (IEC class 1)
		[°C] whichever is greater	[°C] whichever is greater
Е	0 to 870 °C (32 to 1600 °F)	±1.7 or ±0.5%	±1 or ±0.4%
J	0 to 760 °C (32 to 1400 °F)	±2.2 or ±0.75%	±1.1 or ±0.4%
K	0 to 1260 °C (32 to 2300 °F)	±2.2 or ±0.75%	±1.1 or ±0.4%
T	0 to 370 °C (32 to 700 °F)	±1 or 0.75%	±0.5 or ±0.4%
N	0 to 1260 °C (32 to 2300 °F)	±2.2 or ±0.75%	±1.1 or ±0.4%

For measurement errors in $^{\circ}$ F, calculate using equation above in $^{\circ}$ C, then mulitply the outcome by 1.8.

Transmitter long-term stability

 $\leq 0.1\,^{\circ}\text{C}$ (0.18 $^{\circ}\text{F})$ / year or $\leq 0.05\,\,\%$ / year

Data under reference conditions; % relates to the set span. The larger value applies.

Insulation resistance

Insulation resistance for MgO insulated thermocouples with ungrounded hot junction between terminals and probe sheath, test voltage 500 V_{DC} .

1000 MΩ at 25 °C (77 °F)

These values for insulation resistance also apply between each thermocouple wire at single and duplex constructions with ungrounded hot junction.

Calibration specifications

The manufacturer provides comparison temperature calibrations from

-20 to +300 °C (-4 to +573 °F) on the ITS-90 (International Temperature Scale). Calibrations are traceable to standards maintained by the National Institute of Standards and Technology (NIST). Calibration services are in conformance with ASTM E220. The report of calibration is referenced to the serial number of the RTD assembly.

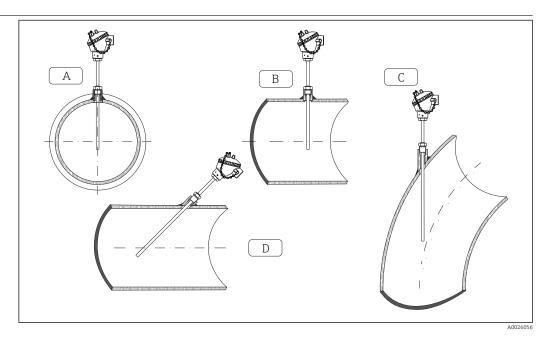

Three point calibrations are provided, given that the specified temperatures are within the recommended range and the minimum length requirements are met as specified. The minimum length is based on overall length 'x' of the spring loaded insert.

Installation conditions

Orientation

No restrictions.

Installation instructions

■ 8 Installation examples

A-B In pipes with a small cross section the thermowell tip should reach or extend slightly past the center line of the pipe (= U)

C-D Tilted installation

The immersion length of the thermometer influences the accuracy. If the immersion length is too small then errors in the measurement are caused by heat conduction via the process connection and the container wall. If installing into a pipe then the immersion length should be at least half of the pipe diameter. A further solution could be an angled (tilted) installation (see C-D). When determining the immersion length all thermometer parameters and the process to be measured must be taken into account (e.g. flow velocity, process pressure).

- Installation possibilities: Pipes, tanks or other plant components
- $\ \ \, \blacksquare$ Minimum immersion length should be 10 times the OD of the sheath, nominal.

Environment

Ambient temperature range

Terminal head	Temperature in °C (°F)
Without mounted head transmitter	Depends on the terminal head used and the cable gland or fieldbus connector, see Terminal heads' section
With mounted head transmitter	-40 to 85 °C (-40 to 185 °F) SIL mode (HART 7 transmitter): -40 to 70 °C (-40 to 158 °F)
With mounted head transmitter and display	−20 to 70 °C (−4 to 158 °F)
With mounted field transmitter	 Without display: -40 to 85 °C (-40 to 185 °F) With display and/or integrated overvoltage protection module: -40 to +80 °C (-40 to +176 °F) SIL mode: -40 to +75 °C (-40 to +167 °F)

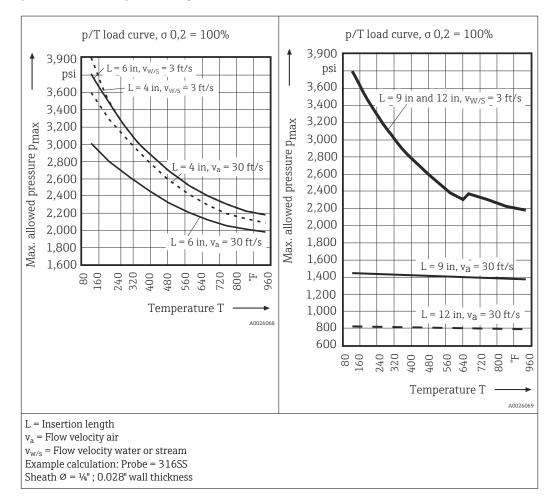

Shock and vibration resistance

4 g/2 to 150 Hz as per IEC 60068-2-6

Process

Process pressure limits

p/T load curve example according to Dittrich

- Avoid resonance frequency as this will cause damage to the probe!
 - L = 4 and 6 in: Resonance frequency occurs when permanent flow velocity is at 18.1, 22.6 or 27.1 ft/s (air) for 6 in and/or 40.5, 50.6 or 60.8 ft/s (air) for 4 inch probe (T = 482 °F, p = 2700/2600 psi).
 - L = 9 and 12 in: Resonance frequency occurs when permanent flow velocity is at 8.1, 10.1 or 12.1 ft/s (air) for 9 inch and/or 4.6, 5.7 or 6.8 ft/s (air) for 12 inch probe (T = 482 °F, p = 2600 psi).
- The calculation was done for pipes only, for MgO insulated thermocouples the values might be higher. In any case for different lengths, other materials, variation in sheath diameter or wall thicknesses, stress analysis is recommended. Failures are caused by forces imposed by static pressure, steady state flow, and vibration.

Max. allowable process pressure (PSIG) for instrumentation with one time adjustable compression fittings.

Hot or measuring junction

Grounded junction

■ 10 Grounded junction

The thermocouple junction is welded securely into the closure end of the sheath, becoming an integral part of the weld. This is a good general purpose, low cost junction providing faster response times than an ungrounded junction of similar sheath diameter. Grounded junctions should not be used with Type T thermocouples, due to the copper wire. For a reliable temperature reading of grounded thermocouples transmitters with galvanic isolation are strongly recommended. iTEMP transmitters have galvanic isolation of min. 2 kV (from the sensor input to the output and the housing).

Ungrounded junction

■ 11 Ungrounded junction

The welded thermocouple junction is fully isolated from the welded closed end sheath. This junction provides electrical isolation to reduce problems associated with electrical interference. Ungrounded junctions are also recommended for use in extreme positive or negative temperatures, rapid thermal cycling and for ultimate corrosion resistance of the sheath alloy. iTEMP transmitters have an excellent noise immunity (EMC) meeting all requirements listed under IEC 61326 for use in noisy environments.

Dual ungrounded elements supplied with individually isolated junctions, except $0\frac{1}{16}$ " which are supplied with common junctions.

Weight

0.5 to 2.5 kg (1 to 5.5 lb)

Material

Process connection, terminal head and sheath

The temperatures for continuous operation specified in the following table are only intended as reference values for use of the various materials in air and without any significant compressive load. The maximum operation temperatures are reduced considerably in some cases where abnormal conditions such as high mechanical load occur or in aggressive media.

Material name	Short form	Recommended max. temperature for continuous use in air	Properties
AISI 316/ 1.4401	X5CrNiMo17-12-2	650°C (1202°F) 1)	 Austenitic, stainless steel High corrosion resistance in general Particularly high corrosion resistance in chlorine-based and acidic, non-oxidizing atmospheres through the addition of molybdenum (e.g. phosphoric and sulfuric acids, acetic and tartaric acids with a low concentration)
AISI 316L/ 1.4404 1.4435	X2CrNiMo17-12-2 X2CrNiMo18-14-3	650 °C (1202 °F) ¹⁾	 Austenitic, stainless steel High corrosion resistance in general Particularly high corrosion resistance in chlorine-based and acidic, non-oxidizing atmospheres through the addition of molybdenum (e.g. phosphoric and sulfuric acids, acetic and tartaric acids with a low concentration) Increased resistance to intergranular corrosion and pitting Compared to 1.4404, 1.4435 has even higher corrosion resistance and a lower delta ferrite content
Alloy600/ 2.4816	NiCr15Fe	1100°C (2012°F)	 A nickel/chromium alloy with very good resistance to aggressive, oxidizing and reducing atmospheres, even at high temperatures Resistant to corrosion caused by chlorine gas and chlorinated media as well as many oxidizing mineral and organic acids, sea water etc. Corrosion from ultrapure water Not to be used in a sulfur-containing atmosphere

¹⁾ Can be used to a limited extent up to $800\,^{\circ}$ C (1472 $^{\circ}$ F) for low compressive loads and in non-corrosive media. Please contact your Endress+Hauser sales team for further information.

Housing

Terminal heads

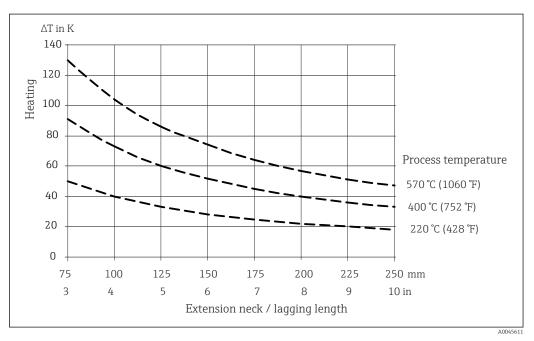

All terminal heads have an internal shape and size in accordance with DIN EN 50446, flat face and a thermometer connection with a $\frac{1}{2}$ " NPT thread. All dimensions in mm (in). Specifications without head transmitter installed. For ambient temperatures with head transmitter installed, see the 'Environment' section.

As a special feature, Endress+Hauser offers terminal heads with optimized terminal accessibility for easy installation and maintenance.

H

Some of the specifications listed below may not be available on this product line.

As illustrated in the following diagram, the length of the extension neck can influence the temperature in the terminal head. This temperature must remain within the limit values defined in the "Operating conditions" section.

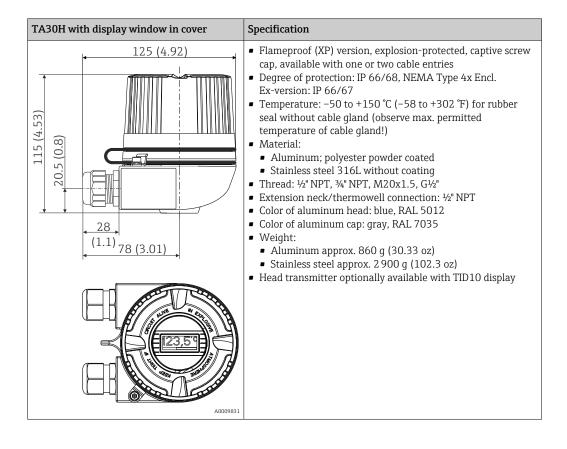

■ 12 Heating of the terminal head as a function of the process temperature. Temperature in terminal head = ambient temperature 20 $^{\circ}$ C (68 $^{\circ}$ F)+ Δ T

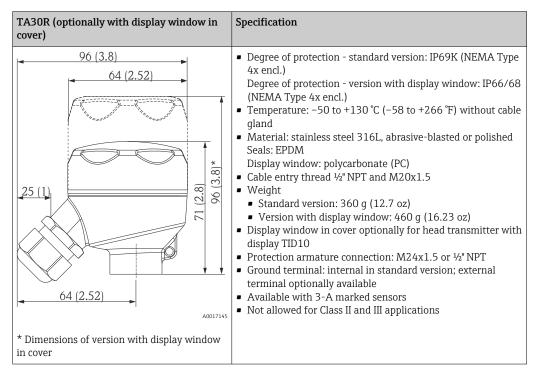

The diagram can be used to calculate the transmitter temperature.

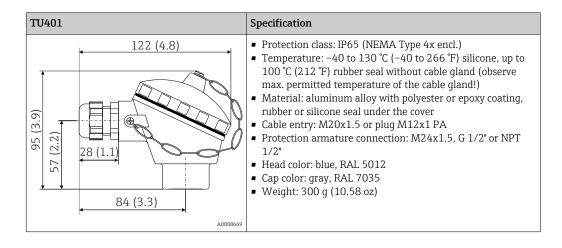

Example: At a process temperature of 220 °C (428 °F) and with a lagging length of 100 mm (3.94 in), the heat conduction is 40 K (72 °F). The transmitter temperature is therefore 40 K (72 °F) plus the ambient temperature, e.g. 25 °C (77 °F): 40 K (72 °F) + 25 °C (77 °F) = 65 °C (149 °F).

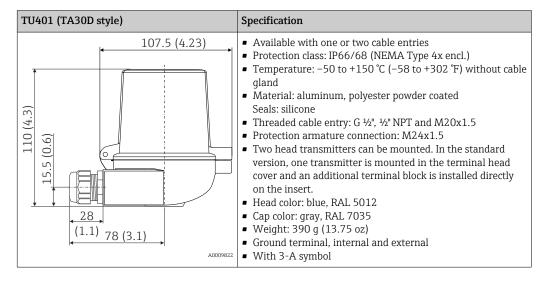

Result: The temperature of the transmitter is o.k., the length of the lagging is sufficient.

	Applicator is available: Via the Internet: https://portal.endress.com/webapp/applicator On CD-ROM for local PC installation.	

Product Configurator - the tool for individual product configuration Up-to-the-minute configuration data Depending on the device: Direct input of measuring point-specific information such as measuring range or operating language Automatic verification of exclusion criteria Automatic creation of the order code and its breakdown in PDF or Excel output format Ability to order directly in the Endress+Hauser Online Shop The Configurator is available on the Endress+Hauser website: www.endress.com -> Click "Corporate" -> Select country -> Click "Products" -> Select the product using the filters and search field -> Open product page -> The "Configure" button to the right of the product image opens the Product Configurator.

W@M Life cycle management for your plant W@M supports with a wide range of software applications over the entire process: from planning and procurement, to the installation, commissioning and operation of the measuring devices. All the relevant device information, such as the device status, spare parts and device-specific documentation, is available for every device over the entire life cycle. The application already contains the data of your Endress+Hauser device. Endress +Hauser also takes care of maintaining and updating the data records. W@M is available: Via the Internet: www.endress.com/lifecyclemanagement On CD-ROM for local PC installation.

	FDT-based plant asset management tool from Endress+Hauser. It can configure all smart field units in your system and helps you manage them. By using the status information, it is also a simple but effective way of checking their status and condition. For details, see Operating Instructions BA00027S and BA00065S
--	---

DeviceCare SFE100	Configuration tool for devices via fieldbus protocols and Endress+Hauser service protocols. DeviceCare is the tool developed by Endress+Hauser for the configuration of Endress+Hauser devices. All smart devices in a plant can be configured via a point to-point or point-to-bus connection. The user-friendly menus enable transparent and intuitive access to the field devices.	
	For details, see Operating Instructions BA00027S	

System components	Accessories	Description
	Process display RIA15	The display unit records the analog measuring signal from the head transmitter and shows this on the display. The LC display shows the current measured value in digital form and as a bar graph indicating a limit value violation. The process display unit is integrated in the 4 to 20 mA or HART® loop and is powered directly from the current loop. Optionally up to four of a sensor's HART® process variables can be displayed. For details, see the "Technical Information" document TI01043K/09/EN
	Ecograph T, RSG35	Universal graphic display recorder with up to 12 universal inputs, 5.7" TFT screen for displaying measured values in a maximum of four groups, with digital, bar graph and curve display. For details, see "Technical Information" TI01079R/09/EN

Active barrier RN221N	Active barrier with power supply for safe separation of 4 to 20 mA standard signal circuits. Has bidirectional HART® transmission and optional HART® diagnostics if transmitters are connected with monitoring of 4 to 20 mA signal or HART® status byte analysis and an E+H-specific diagnostic command. For details, see "Technical Information", TI00073R/09/en	
Power supply RNS221	Supply unit for powering two 2-wire measuring devices solely in the non-Ex area. Bidirectional communication is possible via the HART communication jacks. For details, see "Technical Information" TI00081R and Brief Operating Instructions KA00110R	

Documentation

Brief operating instructions - thermocouple assemblies

- TH51, (KA00184R)
- TH52, (KA00185R)
- TH56, (KA00186R)

Technical information temperature transmitter iTEMP

- TMT71, PC-programmable, single-channel, RTD, TC, Ω, mV, (TI01393T)
- HART® TMT72, PC-programmable, single-channel, RTD, TC, Ω, mV, (TI01392T)
- HART® TMT82, (TI01010T)
- PROFIBUS® PA TMT84, two-channel, RTD, TC, Ω, mV .(TI00138R)
- FOUNDATION Fieldbus™ TMT85, (TI00134R)
- Pt TMT180, (TI00088R)
- PCP TMT181, (TI00070R)
- HART® TMT182, (TI00078R)
- Field transmitter:
 - TMT162 HART® 7 and SIL certification, (TI01344T)
 TMT142B HART® 7, (TI00107R)

Application example - Technical information

- Temperature transmitter iTEMP PCP DIN rail TMT121, (TI00087R)
- Temperature transmitter iTEMP HART® DIN rail TMT122, (TI00090R)
- Loop-powered process display RIA15 (TI01043K)
- Power supply RNS221, (TI00081R)
- Universal Data Manager Ecograph T, RSG35, (TI01079R)
